

# Helping Children Thrive in a Diverse Society

## Helping Children Thrive in a Diverse Society

Here in California, we live in a very diverse society. According to [Wikipedia](#), “No single racial or ethnic group forms a majority of California’s population, making the state a [minority-majority state](#).” Our children attend school with children who are racially and ethnically differently than they are. This creates an opportunity for an enriching experience for our children.

How can parents help their children thrive in this diverse society?

Get to know your children’s friends and especially their friend’s parents. Sometimes the primary language spoken may be different than yours, but friendliness and mutual love for your children will surpass the language barrier.

Expose your children to stores, food and events that represent the various ethnic groups living in your community. As a family, embrace your whole community, even the parts that represent cultures that are different than your ethnic background.

At school or community gatherings, be an example to your children by introducing yourself and socializing with people who are different than you are.

Read with your children about the history and backgrounds of the various immigrant groups in your community.

Teach your children to recognize the common humanity in all people.

I was recently introduced to a wonderful children's book called [What Does It Mean To Be Global?](#) by [Rana DiOrio](#). It expands children's sense of how they can live and what they can do to be part of a diverse world. I highly recommend books like these that expand our children's view of who they can be, and that honor diversity.

It is never too early to learn what it means to be a global citizen. We can prepare our children for the ever evolving society they will eventually be part of building. Let us begin by embracing our diverse communities, so that our children will be comfortable with the diversity that surrounds them.

With love and affection,

Rosemarie
